

# Orange shield – Failed file

Open the program the program by clicking on the Online backup logo or click at the logo once with the right mouse button. Choose "Open" from the menu.

1. Click on the "failed file" link.

1. In the pop-up windows you can see the systems situation. Choose "Show" to see the failed files.

File name	Full path	Fail time	Error type	Error text	Action:
testing this again.doc	C:\Documents	7/14/2011 4:01:28 PM	Unauthorized	Tiedostoa C:\Documents and ...	Nothing
test.txt	C:\Documents	7/14/2011 4:01:28 PM	Unauthorized	Tiedostoa C:\Documents and ...	Nothing
testing testing.doc	C:\Documents	7/14/2011 4:01:29 PM	Unauthorized	Tiedostoa C:\Documents and ...	Nothing
testS.txt	C:\Documents	7/14/2011 4:01:29 PM	Unauthorized	Tiedostoa C:\Documents and ...	Nothing

**1) Nothing**  
The file will be backed up the same way as before

**2) Don't alarm from this item**  
The file will be backed up, but the program will not alarm for it.

**3) Don't backup this item**  
The file will be removed from the backup

	<p>Backing up a file can fail of the following reasons.</p> <p><b>1) Unauthorized</b> The file does not need right from the main user or from another user to be backed up. The file has to have the right defined in the Local System- account.</p> <p><b>2) Connection</b> The Internet- connection has had some problem during the backup.</p> <p><b>3) The file could not be read</b> The file could not be read. It's most likely that the fault is in the Microsoft Shadow Copy – service. Check that services called "Volume Shadow Copy" and "Microsoft Software Shadow Copy Provider" are on.</p> <p><b>4) Outlook message specific backup</b> If the Outlook message specific backup doesn't work it is most likely that the program interface with Outlook-program doesn't work. If this is the case, installing the program again is recommended. At this time the Outlook message specific backup doesn't work in 64-bit operating system.</p> <p><b>5) Common error</b> The error could not be specified.</p>
	<p>Exception can be made file specific. For a non important file, for example for a temporary file "Don't backup this item" can be chosen. For an important file it is recommended to try to find out why the backup failed.</p>
