

## Command center – Client limit

The client limit defines how much space one user has. If the client limit hasn't been defined the users will share the total space.

Type:

State:

Standard:  used 6

Server:  used 0

Extra space:  GB

Total Space:  GB

Client limit:  GB (0=not in use)

Created:

Valid to:

Comments:

1. Choose "License" from the submenu.
2. Define the client limit.
3. Lastly save.

The **Standard**-license includes 5GB of disk space and the **Server**-license includes 50GB disk space.

The program will automatically count the costumers disk space in the total space field. When you have entered the license amount and chosen save the total space will update itself.

*The disk space will be shared among the licenses. For example 5 standard licenses and one server license equals 75GB, however one workstation can have over 5GB backups as long as the total amount of all the licenses doesn't exceed 75GB*
