

# What to do – 0 files secured

It is recommended to try the directions one stage at a time and check between the different stages if the problem has been solved..

## 1. Download the newest version

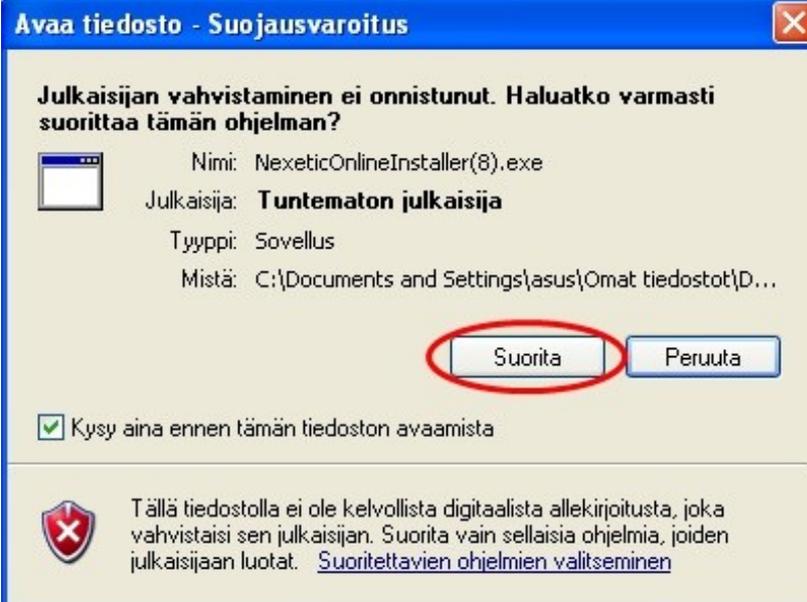

The newest program version is available for downloading at [www.nexetic.com](http://www.nexetic.com).

Choose "Save File"

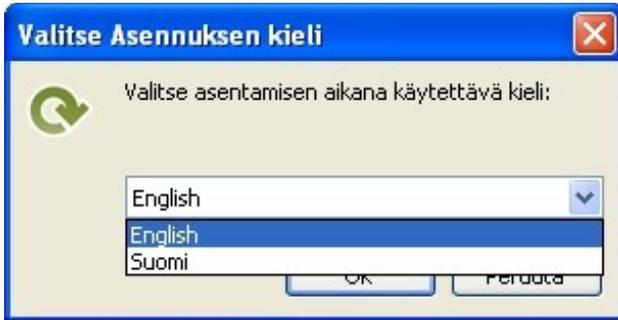

Press OK.

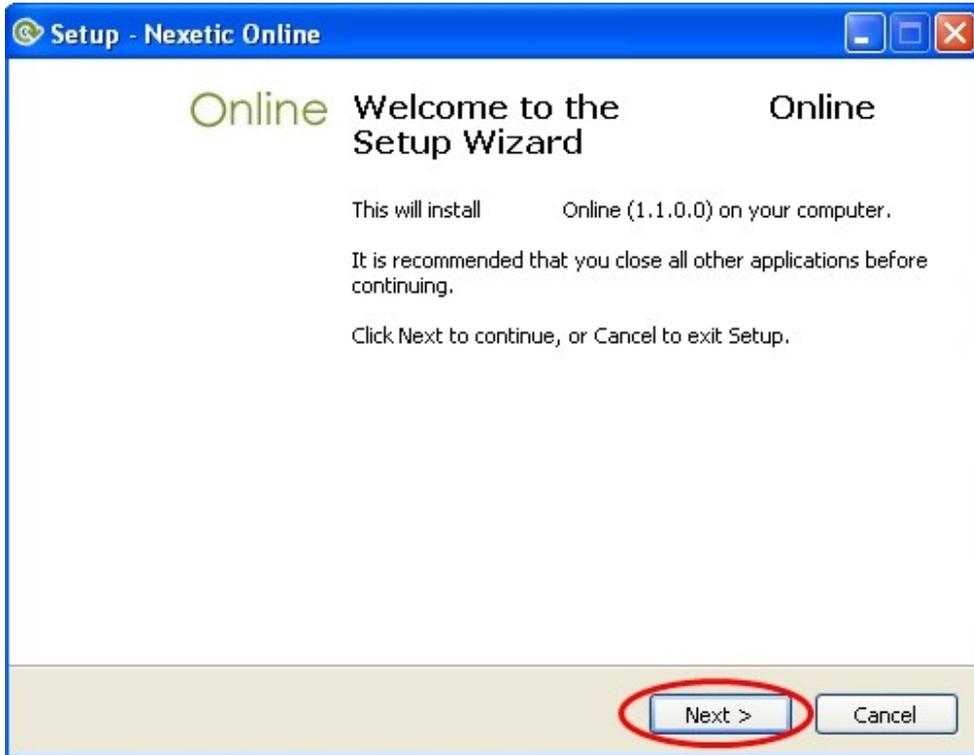

The question is asked because the file is in .exe form.

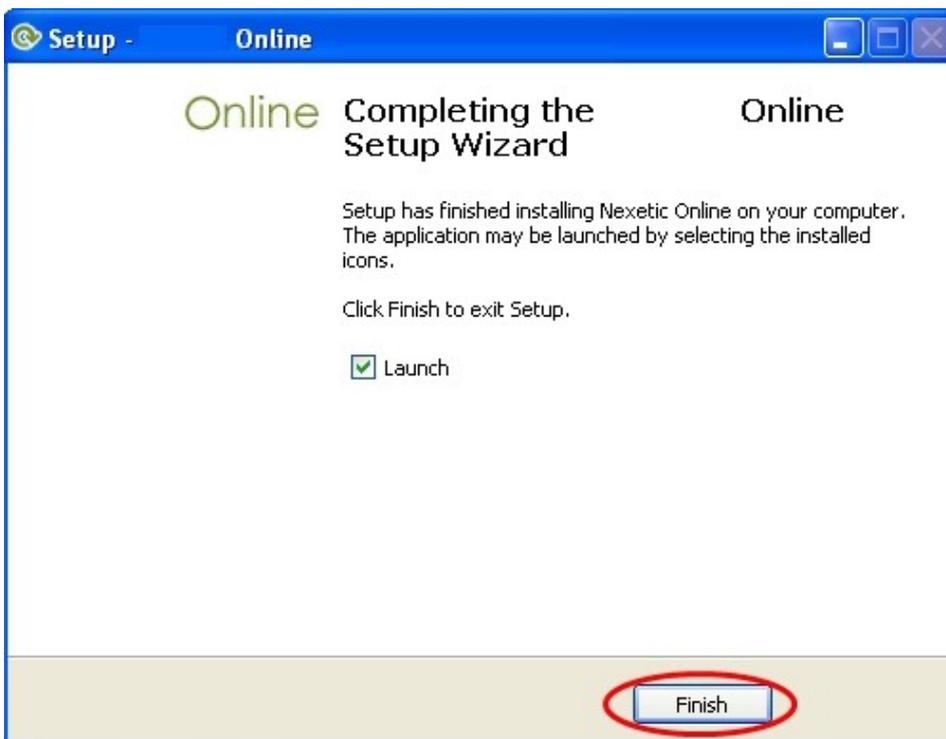

Choose "Run"

Choose the language used during the installation. Press OK when you have chosen a language.

Choose "Next"

Choose "Launch" and the program will automatically start after the installation is completed.

Lastly press "Finish"

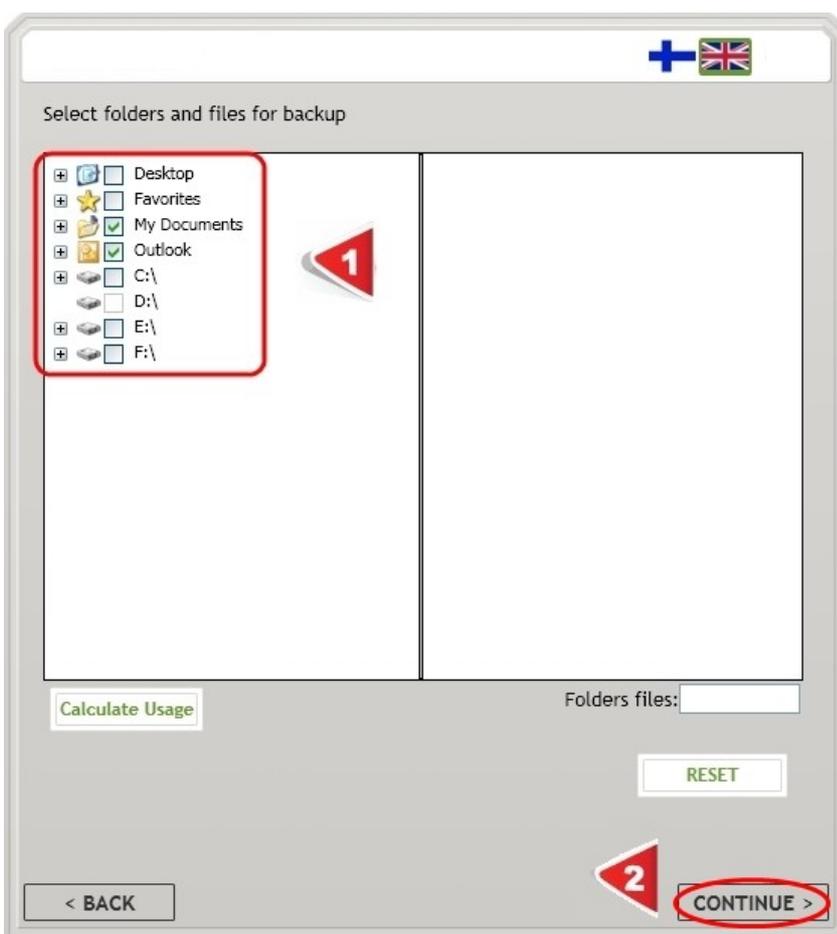

## 2. Check file selections

Open the program by clicking on the Online backup logo or click on the logo once with the right mouse button. Choose “Open” from the menu.

Choose “Settings”

1. Choose “Files” from the menu.

2. Only choose the most important files and folders.

However don't choose, for example, the whole C-disk, only choose the important files located on it.

3. Lastly save.

If neither of the suggestion above helps it is recommended to check that the program is in the computers firewall exceptions.
