

What to do – No backup for a month/long time

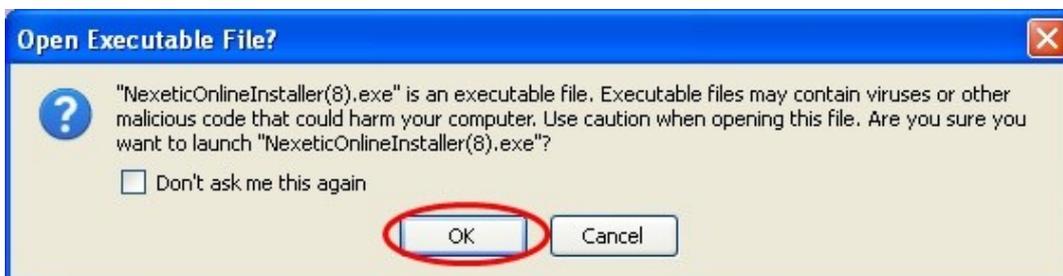

If no backups as been taken for a while it's best to download the newest version to begin with. Follow the instructions one step at a time and after each step check if the problem has been solved.

1. Download newest version

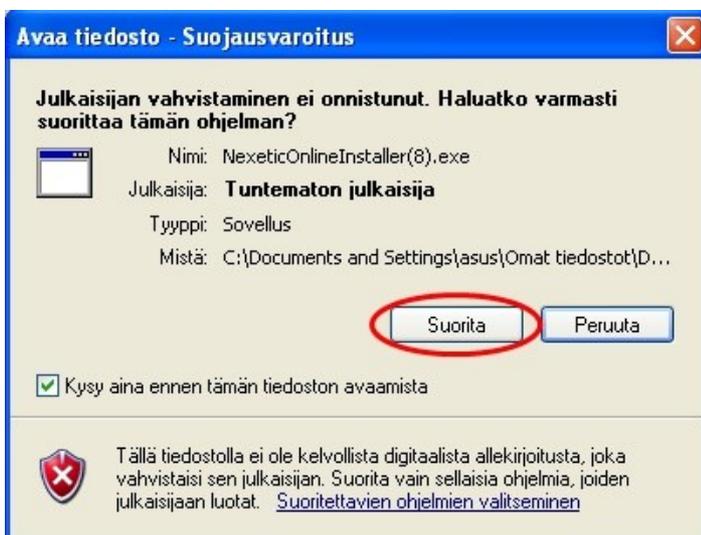

The newest program version can be downloaded from the homepage.

Choose "Save file"

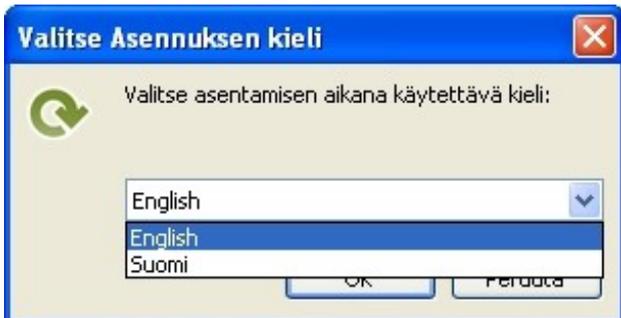

Press OK.

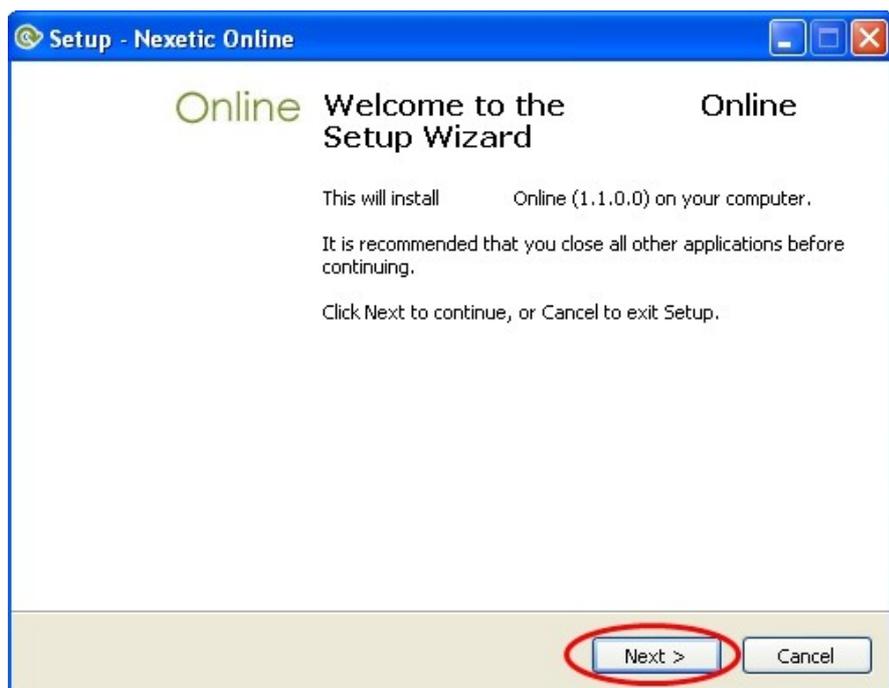

The questions appears because the file is in .exe form.

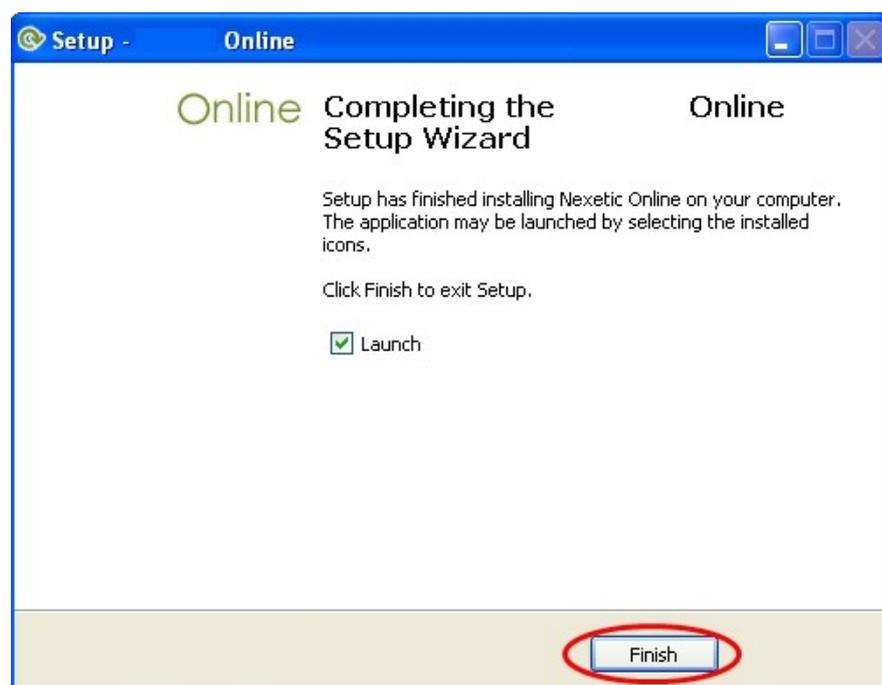

Choose "Run" ("Suorita") if you want to install the program.

Choose the language to be used. Press Ok when you have chosen the language.

Choose "Next".

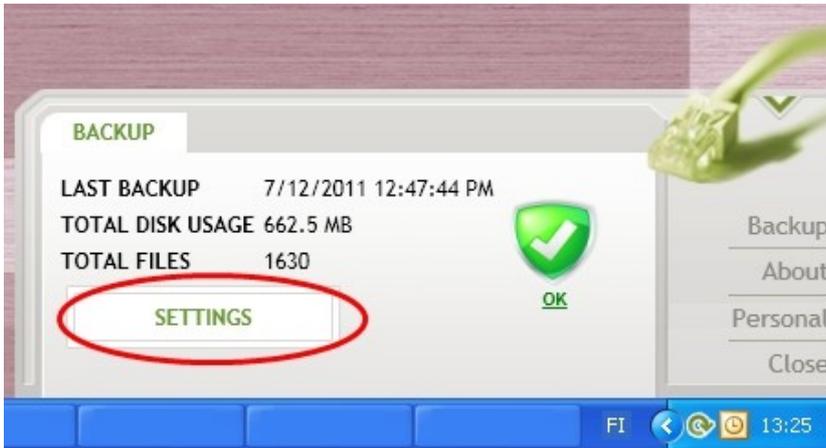

Choose "Launch" and the program will start by itself after installing.

Lastly press "Finish"

2. Check timing

Open the program by clicking on the Online backup logo or click once on the logo with the right mouse button. Choose "Open" from the menu.

Choose "Settings"

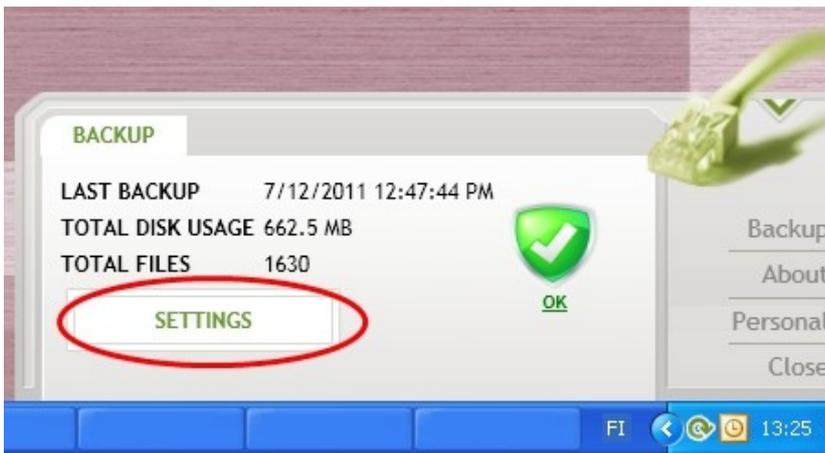

1. Choose "Timing" from the menu
2. Check that timed backup is on.
Choose time and days when the automatic backup should be done.
3. Lastly save.

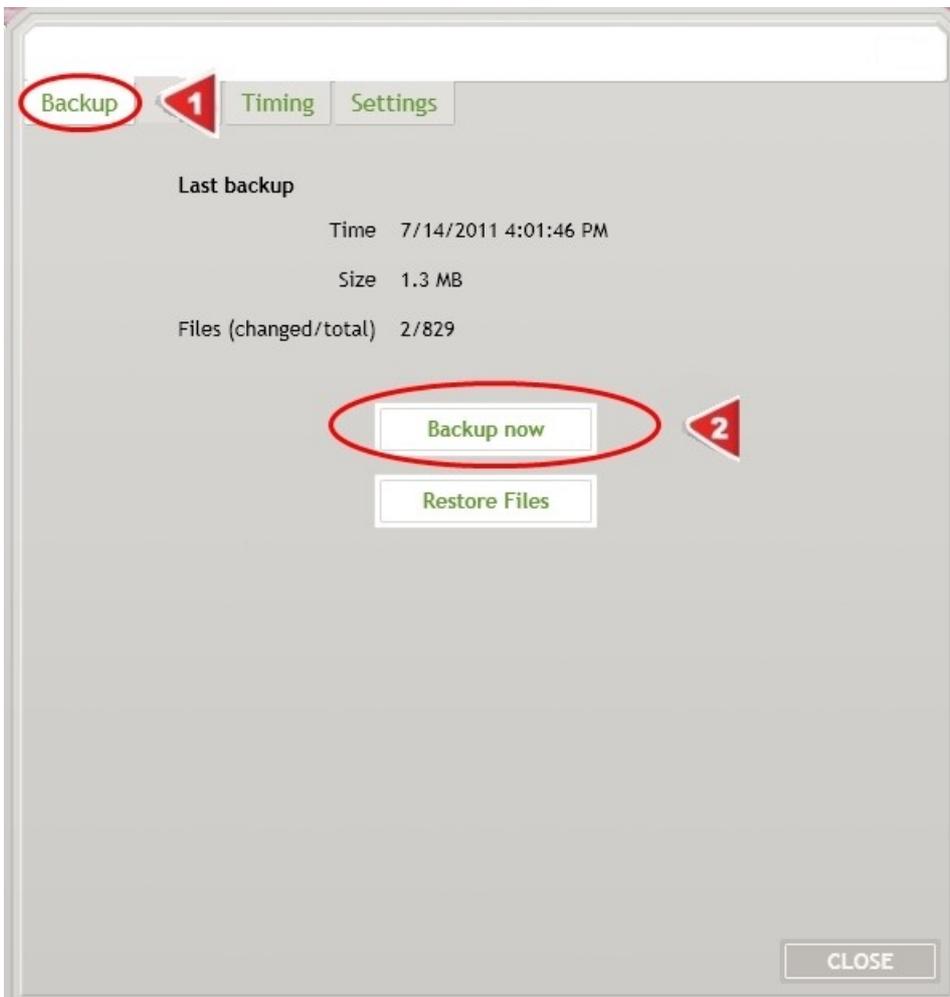

3. Manual backup

Open the program by clicking on the Online backup logo or click once on the logo with the right mouse button. Choose "Open" from the menu.

Choose "Settings"

1. Choose "Backup" form the menu

2. Choose "Backup now"

It is recommended to check that the program is in your computers firewall exceptions.
